

BizMind: Every Entrepreneur, Data-Driven

UM Hackathon 2026

The Problem: Decision Paralysis

Introducing Sayyid: the owner of a food stall.

The Solution: BizMind Virtual COO

BizMind isn't just a chatbot—it's a Virtual COO that uses Python-based math logic combined with Z AI GLM reasoning to provide a growth strategy.

Python-powered mathematical analysis

Z AI GLM reasoning engine

Personalized growth strategies

Real-time decision support

How It Works: Technical Architecture

Step 1: User Input

Raw sales and context data

Step 2: Backend Logic

FastAPI computes sales velocity and variance

Step 3: Z AI Reasoning

Generates insight, recommendation, explanation, and impact

Core Feature: Sales Intelligence

Automated analytics that compare Weekday vs. Weekend performance. Show a dashboard visualization with sales metrics, trends, and performance comparisons.

Sales Velocity

128 deals/week

Weekday vs. Weekend

Weekday: 84% | Weekend: 16%

Performance Trend

Revenue up 12% vs. last month

Actionable Insights

Focus staffing and campaigns on peak weekday hours

Core Feature: Smart Partner Matching

JSON-based matching system that connects users to local partners based on their specific business needs.

Logistics partners

Customized matching algorithm

Local business ecosystem integration

The Decision Intelligence Edge

Backend math verification

Powerful financial guiding tool

AI reasoning with explanations.

Trustworthy recommendations

Next steps

Future vision

01 WhatsApp Business integration

02 Expanded partner ecosystem

03 Multi-language support

Conclusion

Empowering small businesses

Accuracy over intuition

From advice to action

Transforming raw data into economic opportunities

Empowering the backbone of the *Malaysian* economy.
